**Items marked with the letter A will yield a high quality lawn. Application of the other steps will help build professional quality turf - ask for more details.**

\* **Turf Trust is the only fertilizer** to contain the compound **CDU®** which stands for Crotonylidene Diurea and is imported from Japan. In Japan, it is the preferred nitrogen source in golf course fertilizers. The CDU® will help to control soil borne pathogens that cause Fusarium Blight, Pythium and Brown Patch. This means less disease problems in the summer.
